1.00 PM EDT

CIO & CTO Questions & Concerns
TBD in the Webinar

1. What steps can we take to proactively defend against data breaches in our cloud environment?

2. What measures are in place to monitor and mitigate insider threats within our cloud ecosystem?

3. What challenges should we anticipate while managing identity security in our cloud environment?

4. Challenges in managing access controls, especially with our multi-cloud operations?

5. How do we ensure centralized visibility and control over our cloud security efforts, including auditing?

6. How do we navigate the permissions scope across these major cloud service providers?

7. How are we ensuring data protection within our cloud environment, especially concerning automated detection and encryption?

8. What are the critical steps for encrypting data at rest and in transit, and how do they factor into our security strategy?

9. How should we maintain compliance and governance standards within our cloud operations?

10. What are the potential consequences of non-compliance in our cloud operations?

11. How do we establish strong network security configurations in our cloud environment, including firewalls and DDoS protection?

12. What are the various modes of access to our cloud resources, and how do we oversee and control them?

13. What are the current industry trends and how can we prioritize our cloud security efforts based on these trends?

14. Shared responsibility model in cloud security.

15. Train inhouse teams in cloud security best practices.
